

KATYA GEORGIEVA

Katya Georgieva is a researcher in the Solar-Terrestrial Influences Laboratory at the Bulgarian Academy of Sciences where she leads the group on “Solar activity influences on weather and climate”. Her research interests are focused on the origin and evolution of different manifestations of solar variability, and their influence on various terrestrial processes on time-scales from days to centuries. She was a regional coordinator of the Balkan, Black sea and Caspian sea countries for the program of the International Heliophysical Year, and is a member of the steering committee of the International Space Weather Initiative.
