A) Ocean acidification and the marine ecosystem

- Seawater chemistry: paleoreconstructions, present observations, future projections
- Impact on calcifying organisms (plankton, corals, commercial shellfish, etc)
- Animal performance characters and species interactions (including ecosystem response)
- Microbial processes and interactions
- Biogeochemical cycles and climate feedbacks

B) Ocean acidification and society and politics

- Valuing economic impacts of ocean acidification
- Governing the oceans
- Communicating ocean issues to the public at large

C) Ocean acidification and climate engineering

- Ocean Iron Fertilization (OIF)
- Enhanced weathering of silicates (olivine)
- Liming the ocean

D) Outreach

- Generating awareness to the public
- Novel approach to awareness and outreach on ocean acidification
- Outreach issues and approaches in the developing world
- Translating governmental commitments to effective and timely outreach programs
