

Michael HATCH

The University of Adelaide

Mike has completed a PhD at the University of Adelaide in 2011 in geosciences, specialising in near-surface geophysics. Much of his research has been applied to using electromagnetic methods to image the salinity distribution in the near-river environment, mostly on the Murray River in South Australia. He has worked for the last 25 years collecting electrical and electromagnetic data, primarily for the mineral exploration industry. Recently he has been involved in the use of relatively new technologies to quantify and spatially locate the distribution of greenhouse gases near the Earth's surface.
