

Kenichiro KOBAYASHI

*Associate Professor, Kobe University,
Research Center for Urban Safety and Security, Japan*

Prof. Kenichiro KOBAYASHI is currently an Associate Professor of Research Center for Urban Safety and Security, Kobe University, Japan. He also serves as the Associate Professor of Civil Engineering Department, Kobe University where he teaches undergraduate and graduate students. He received two Doctoral degrees, one (Dr. -Ing.) from Stuttgart University, Germany and the other one (Dr. Eng.) from Kyoto University, Japan. His current research field is related with flood hydrology. His research focus is put more on numerical modelling for the rainfall-runoff/inundation simulation; occasionally using the K supercomputer in Kobe, Japan. His research fields are, e.g. Volta River, Africa, Mekong River and many other Japanese rivers. His rainfall-runoff/inundation model has already succeeded in simulating flood events specifically in Japan. At present, the models are being applied to several rivers in Africa and Asian countries. Especially, using the K supercomputer, his model is considered one of the fastest inundation simulation models in the world. He is currently co-responsible for the Catalogues of Hydrologic Analysis, a challenging activity of UNESCO-International Hydrological Programme Regional Steering Committee for South East Asia and Pacific region. He is the member of IAHS, IAHR, Japan Society of Civil Engineers, Japan Society of Hydrology and Water Resources and others.
