

## Abstract Details

[AOGS 1st Annual Meeting](#) > [Natural Hazards](#) > **Prediction of Earthquake and Technology** >

**Corresponding Author :** Mr. sanjay agarwal ([sanjay\\_srms@rediffmail.com](mailto:sanjay_srms@rediffmail.com))

**Organization:** Horizon institute of information technology

**Category:** Natural Hazards

**Paper ID:** 57-ONH-A2006

**Title:** Prediction of Earthquake and Technology

**Abstract:**

Body is composed of cells, blood & water and the H<sup>+</sup> ions of the water are distributed randomly in the whole body fluid and if magnetic field is applied in any particular direction then these ions are polarized in the direction of the magnetic field and give an intensified response, this response is not observed generally in the case of natural magnetic field of the earth. This class of EEG(Electroencephalogram) pattern is based on the different behavior of animals in different conditions. Another form of EEG measurement is EVOKED response. EVOKED response is the measurement of the distortion in the EEG pattern that results from external stimuli.

**Presentation Mode:** Oral

**Keywords:** Biomedical signals, Transducers, Earthquake causes.

**Status:** Pending.
