

The International Living with a Star Program

WILLIAM LIU¹, ANDREW YAU²

¹*Canadian Space Agency*

²*University of Calgary*

The International Living With a Star program coordinates more than a dozen missions with a focus on solar system plasma physics. Through effective coordination, our goal is to ensure that the global community can contribute to, as well as benefit from, the latest experiments in this field. The AOGS community represents one of the most active participants in the ILWS program. In this talk, I describe the overall ILWS program and give a brief outlook to future direction in relation to new instrument and experimental techniques.
