

Toshichika IIZUMI

Senior Researcher

National Agriculture and Food Research Organization (NARO), Japan

Toshichika Iizumi is Senior Researcher at the Institute for Agro-Environmental Sciences, a research center for agricultural impacts of and adaptation to climate change in NARO. His global crop study aims to understand how changes in climate and management have contributed to historical crop production and lead to global food security outlook in coming decades under changing climate and socioeconomy. Using global gridded crop models, climate projections, seasonal climate forecasts and statistical downscaling techniques, his research ultimately aims to aid the transformation of crop production systems into more climate-smart ones. He is Editor of Climate Research.
