

Mission Statement for AOGS Solar and Terrestrial Science (ST) Session President Candidate

Kyung Sun PARK
Chungbuk National University, South Korea

As a candidate for president of the ST session, I pledge to lead in advancing the understanding of solar and terrestrial science, promoting interdisciplinary collaboration, and ensuring equal opportunities among AOGS members while adhering to the organization's values and goals.

- Encouraging open dialogue among students and young researchers in ST Section: I will support connections with a diverse range of participating and established scientists to learn from their experiences, engage in discussions, and discover opportunities for potential research collaboration.
- Interdisciplinary collaboration: I will endeavor to organize joint sessions to integrate interdisciplinary expertise across increasingly specialized and segmented fields. This will solve complex and diverse problems in the space environment and provide opportunities for ST members to contribute to society.
- Ensuring broad participation and equity for all presenters: I will encourage expanding participation, assign leadership roles, and provide opportunities for diverse members to present in the ST section.

If elected, I will work to ensure that the AOGS ST section, which promotes international cooperative activities, associated technological and educational development, and the opening of a new trend in human activities, is well prepared for our future generation.
